OMAR FAROOQ

Machine Learning Engineer, Forecasting

Faisalabad, Pakistan | omar.farooq@example.com | Professional experience: 3 years 6 months

PROFESSIONAL PROFILE

ML engineer with 3 years 6 months of professional experience in demand forecasting and operational decision support. Strong Python, deep-learning forecasting and model evaluation background, with limited LLM product work.

TECHNICAL SKILLS

- Python, pandas, scikit-learn, XGBoost, PyTorch forecasting, SQL
- Machine learning, deep learning for sequence models, time-series backtesting
- Forecast evaluation: WAPE, MAE, MAPE, rolling-origin validation, segment-level error analysis
- Airflow, MLflow, Docker, FastAPI, cloud storage and internal APIs

PROFESSIONAL EXPERIENCE

Machine Learning Engineer | FleetSignal (fictional) | **Apr 2023 - Present**

- Developed Python time-series demand models using XGBoost, seasonal features and PyTorch LSTMs for depot operations.
- Evaluated forecasts using rolling-origin backtests, naive seasonal baselines, WAPE and regional slice analysis.
- Served daily prediction results via FastAPI to scheduling teams and monitored drift across operating regions.
- Automated retraining and data-quality checks through Airflow, Docker, SQL and versioned experiment logs.
- Implemented lightweight text normalization for support-tag enrichment but did not build production NLP/LLM products.

SELECTED PROJECT OUTCOMES

Route-demand forecasting: PyTorch sequence modeling; historical splits and repeated rolling evaluation.

Fleet analytics service: REST endpoints used by a logistics application; limited AI-agent framework exposure.

EDUCATION AND NOTES

- BS Statistics and Data Science | Central Applied Institute (fictional), 2022
- Currently exploring hosted LLM APIs and LangChain in personal learning; no professional LangChain project
- Professional ML tenure: Apr 2023 - Oct 2026 (3 years 6 months)
