RIDA HASSAN

Computer Vision ML Engineer

Peshawar, Pakistan | rida.hassan@example.com | Professional experience: 3 years 9 months

PROFESSIONAL PROFILE

Computer-vision engineer with 3 years 9 months of professional experience developing research-facing medical image analysis tools, clinically separated validation datasets, PyTorch training and monitored inference services.

TECHNICAL SKILLS

Python, PyTorch, TensorFlow, OpenCV, scikit-learn, image augmentation	Deep learning: CNNs, segmentation, transfer learning, uncertainty calibration
Evaluation: Dice, IoU, sensitivity/specificity, AUROC, patient-level splits	FastAPI, DICOM preprocessing, Docker, experiment tracking, GCP storage

PROFESSIONAL EXPERIENCE

Computer Vision Engineer | Crescent Imaging Labs (fictional) | **Jan 2023 - Present**

- Trained and compared PyTorch segmentation models on de-identified medical imaging datasets using patient-separated train/validation/test partitions.
- Evaluated sensitivity, AUROC, Dice and hospital-site drift; documented leakage controls and clinical deployment limitations.
- Implemented a Python inference API for clinicians to review segmentation masks as decision support, not autonomous diagnosis.
- Built TensorFlow transfer-learning baselines and retained reproducible experiment metadata.
- Worked with QA teams on human verification and error analysis for imaging edge cases.

SELECTED PROJECT OUTCOMES

Segmentation quality suite: Held-out patient testing, threshold calibration, full confusion reviews and visual overlays.

EDUCATION AND NOTES

- BS Biomedical Engineering | East Institute (fictional), 2022
- No professional NLP, hosted LLM integration, LangChain or LangGraph experience claimed
- Professional computer-vision tenure: Jan 2023 - Oct 2026 (3 years 9 months)
